See live Example config here [Student Wellbeing](#)

- Notice when resising screen to mobile break point the image changes to centred subject.

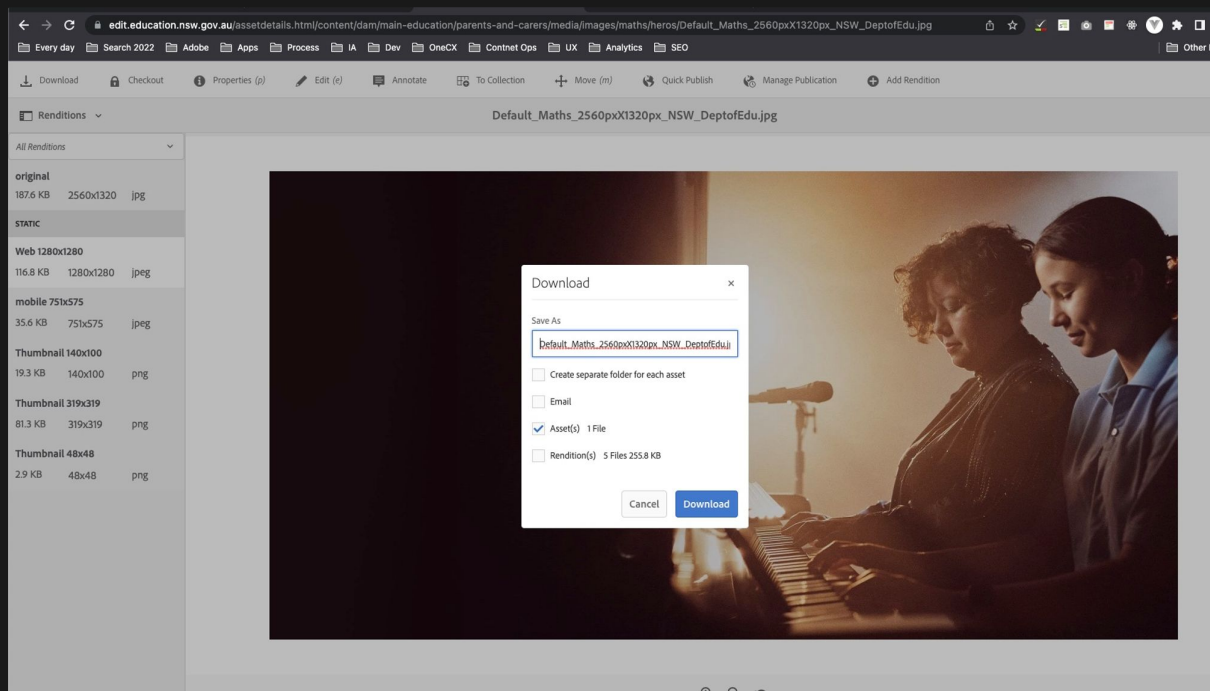

Steps:

- The rendition file name MUST BE EXACTLY **cq5dam.mobile.jpeg**
 - note "jpeg" NOT "jpg".
- Image size should be 751 x 575px
 - this is the size I have found to work best for mobile. It may not be optimal but it's the best I could determine.
 - there is no excuse for this image to be bigger than 50KB
- The whole idea here is that we don't chew up people's mobile data. (and of course have a nice centred image)

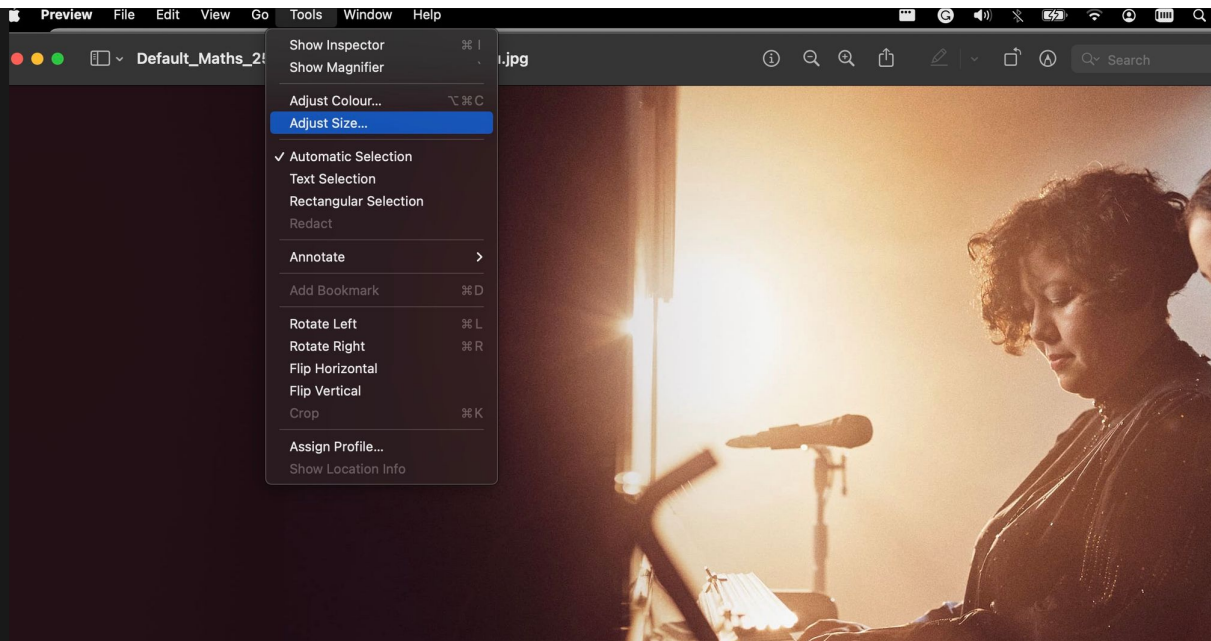

Get and edit image

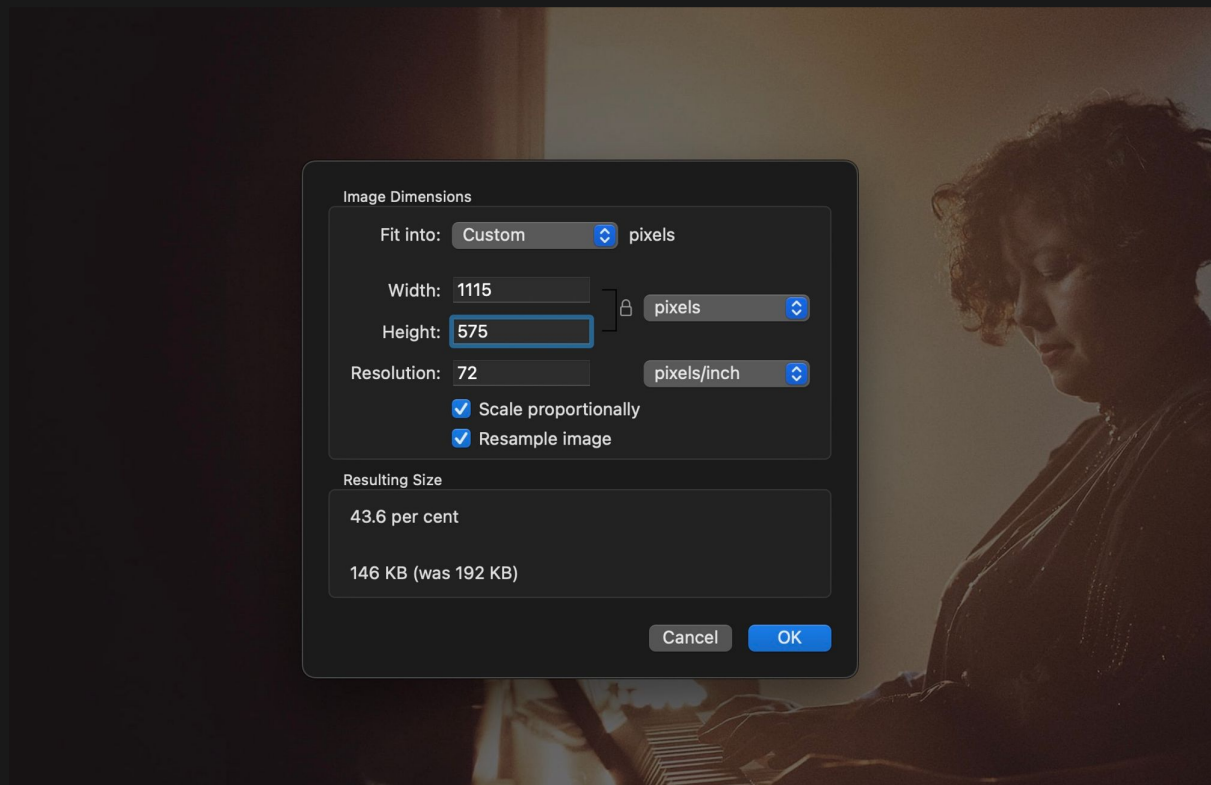

- Click on image file name to open it in edit
- Select "download" in top left
- Select Download button with default selection "zip" 1 asset

Open image using "preview" (Mac)

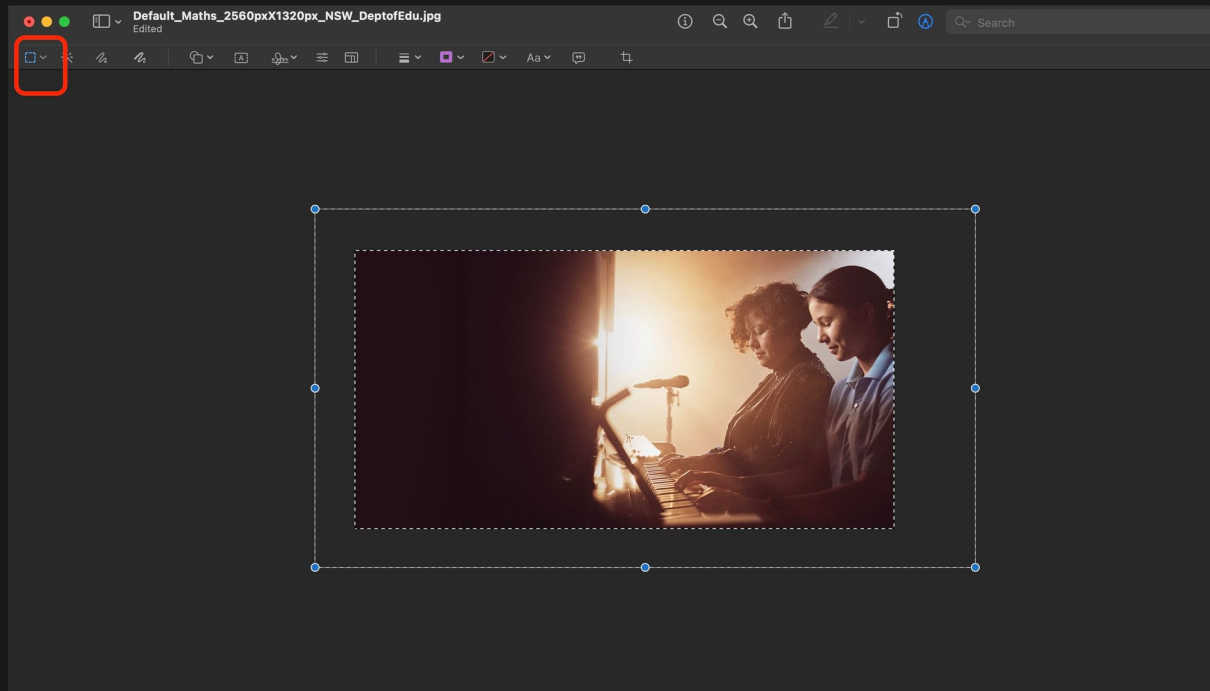

- Adjust size
- Width to 575 px
- Leave the height to adjust relatively
- Make sure resolution is 72dpi
- select "ok"

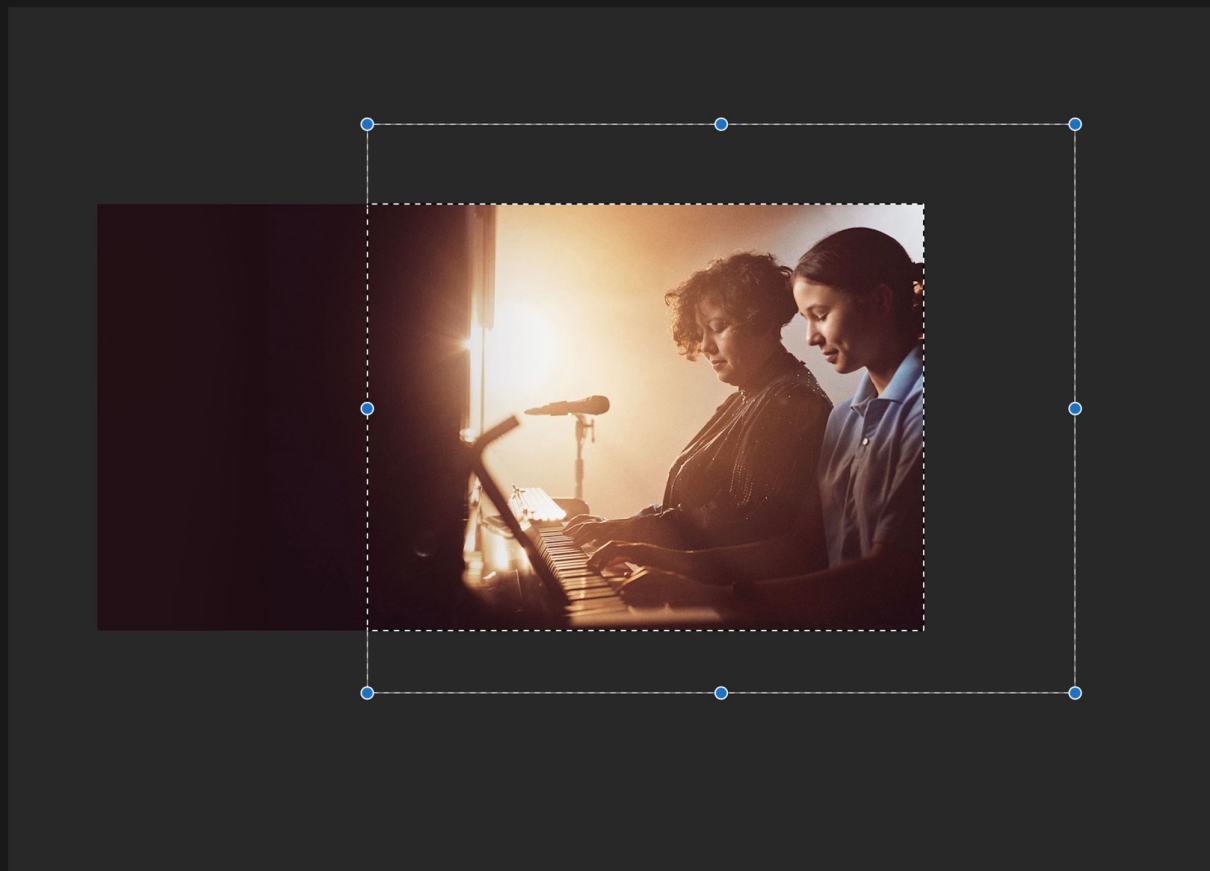

- Slect Crop tool

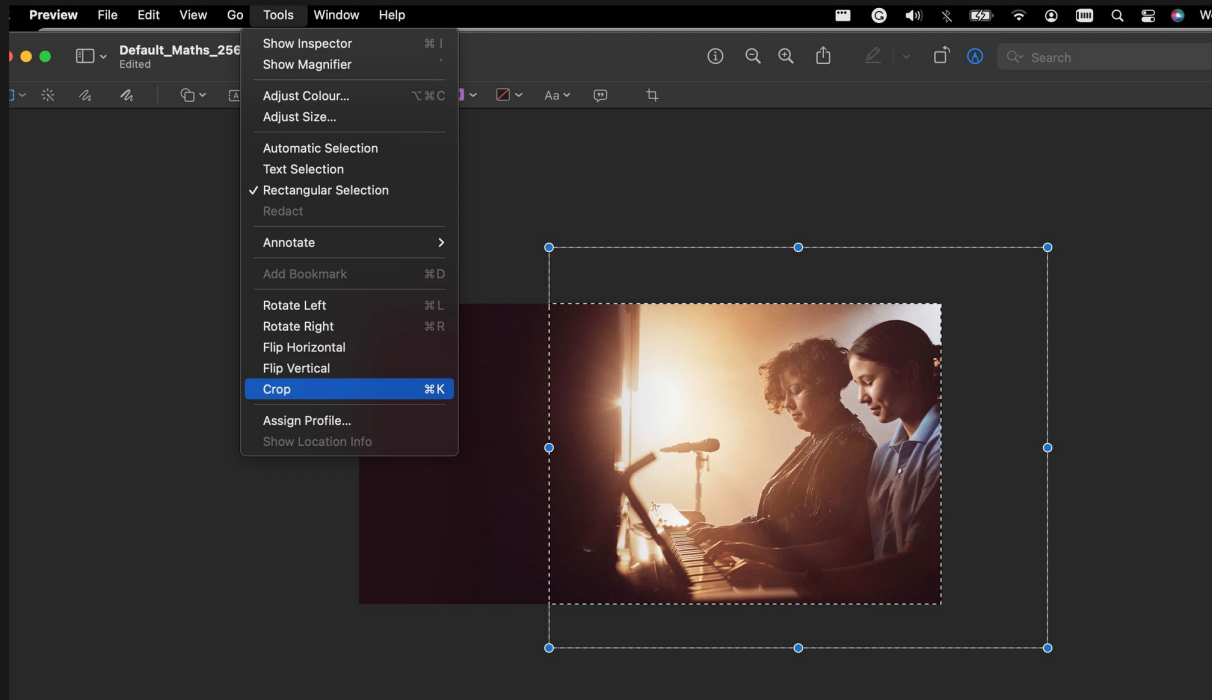

- select the entire image

- Drag the left Crop handle to the right until the image width is 751px

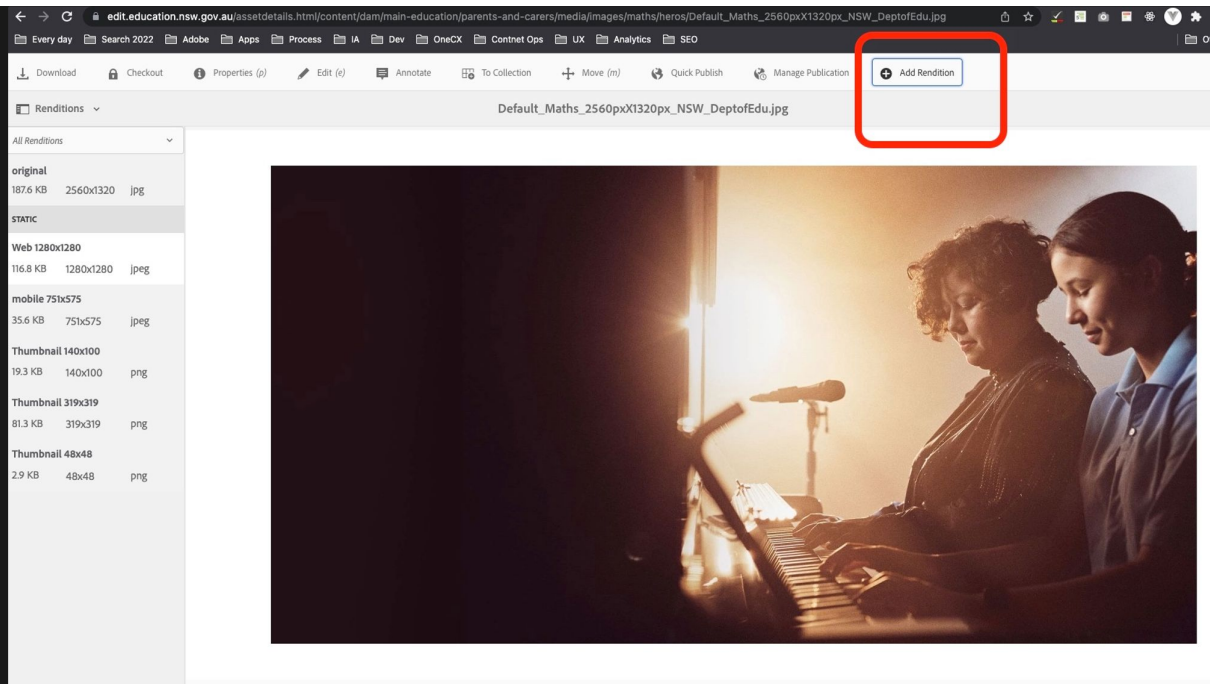

- Select "Tools"
- Select "crop"

- Save the image file as **cq5dam.mobile.jpeg** (it has to be EXACTLY this file name).

Add rendition to DAM

- In AEM DAM
- IN same Place you downloaded the Original Image
- Select "Add rendition"

- select the file from your machine
- Select Quick publish

Configure Full Bleed Banner to use mobile rendition

- Go to the Full Bleed banner using the rendition
- In Full Bleed banner config
- select "Image renditions"
- Select "Mobile Rendition"
- Select Rendition (cq5dam.mobile.jpeg)
