

Section

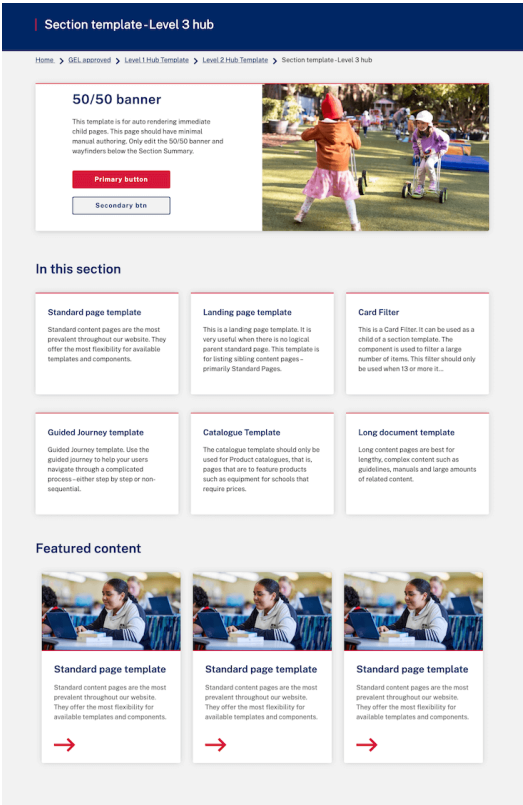

Sections list the sub-categories of the chosen level 1 hub or level 2 hub and provide users with a brief introduction to the content that follows.

What is a section page?

A section will usually be a level 3 page in terms of information architecture. When there's not enough content to justify a **level 2 hub**, section pages will appear on level 2 instead.

Learn more about page structure on the [Page types](#) page.

Example of a Section Template

Page features

Banner

- Each section will have an **optional** unique '50/50 Banner' with image.
- There's space for introductory text and a button for a call to action.

In this section

- This is called a 'Section summary' and is mandatory on section pages.

- Here we populate the immediate child pages so that users can immediately find the information they're looking for. This list is automatically generated.

Wayfinder cards

- Up to 9 Wayfinder cards can be added **below** the expanded navigation ("In this section").
- Wayfinder cards include:
 - image (optional)
 - title
 - description (optional).
- Wayfinder cards must not be used to link to immediate children of the section. The section summary will link to immediate child pages. The Wayfinders are to feature pages that **are not** immediate child pages of the section.
- Don't use Wayfinders to represent buttons
 - Use buttons when you need to create a navigational button.

Section header

- the section header can be configured to:
 - change the title
 - add a URL that our global search will limit a search initiated in the global search box (top right of page) to only the URL entered (inclusive of all pages and assets under the configured URL) .
 - This option then becomes available in our global search user interface.

Request a section

For a new section to be created, the requester must first seek approval from the product owner, via email content@detcorpcomms.zendesk.com to the **Content Team** Zendesk queue.

If the [Information Architecture](#) (IA) is not initially provided, the requester will be asked to provide the 'final' version of the IA. It will become an attachment to the ticket.

Rules

The template hierarchy is designed to enable automatic aggregation of child pages when using Level 2, Section, and Landing page templates.

Section templates can only be siblings of each other. That is, a Section template can not contain a child section template. They must all sit at the same level, as immediate children of the Level 2 hub template or Level 1 Hub template.

The overarching intention of this design is to make it as easy as possible to create and manage your pages.

Section templates must:

- automatically render their child pages (to 1 level down) only
- not include text components (body text)
- if using a banner
 - only use a 50/50 Banner at the top
 - only one 50/50 Banner is to be used on a Section
- only include links (automatically rendered) that link to the following template types:
 - Standard Page
 - Landing Page
 - Guided Journey

- Long Document
- Catalogue
- Card Filter
- Resource page.

Wayfinders:

- Don't use Wayfinders to represent buttons
 - Use buttons when you need to create a navigational button.
